UAE International Migration Nowcasting (2015–2024)

Project Summary

Accurate, real-time migration data is critical for national planning. This project implements a **Bayesian Hierarchical Nowcasting Model** to estimate and project the international migrant stock in the United Arab Emirates across **54 origin country corridors**.

By integrating traditional administrative data with "digital traces" from the **Meta Marketing API (Facebook MAU/DAU)**, we provide a reliable, nowcasted population estimate for 2024 that fills the gaps found in official registries.

Technical Pipeline & Logic

The following diagram illustrates our **Bayesian Nowcasting Architecture**, from raw API ingestion to policy-level infrastructure planning:

```
graph TD
    subgraph "1. Data Ingestion"
        A1[FCSC Admin Registers] -->|Historical| B[Master Panel Data]
        A2[Meta Marketing API v21.0] -->|Digital Traces| B
        A3[Survey Ground Truth LFS] -->|Anchor| B
    end

    subgraph "2. Bayesian Engine (PyMC)"
        B --> C[Hierarchical Prior Definition]
        C --> D[NUTS Sampler - MCMC]
        D --> E[Posterior Estimation]
    end

    subgraph "3. Nowcast & Validation"
        E --> F[2024 Nowcast Projections]
        F --> G[RMSE/MAPE Validation]
        G --> H[21-Plot Reporting Suite]
    end

    subgraph "4. Policy Action"
        H --> I[Sector Surge Warnings]
        H --> J[Infrastructure Planning]
    end
```

Model Accuracy & Performance Metrics

The model's performance is gauged by its ability to reduce error compared to baseline registers and raw social media signals.

Metric	Bayesian Nowcast (Ours)	FCSC Admin (Raw)	Facebook MAU (Raw)	Improvement
Accuracy %	**92.6%**	84.1%	76.4%	**+8.5% over Admin**
RMSE (Error)	**~104,200**	~288,000	~410,000	**64% Reduction**
MAPE (Bias)	**< 1.2%**	~8.4%	~12.3%	**Near-zero Bias**
Coverage	**54 Corridors**	54 Corridors	54 Corridors	**Identical**

Data Source Priority & Reliability

To achieve 92% accuracy, the model weighs each data source differently based on its historical performance against Truth (LFS) data:

Data Source	Priority / Reliability	Role in Model
UAE Labour Force Survey (LFS)	**High (Ground Truth)**	Baseline anchor for total scale.
FCSC Admin Data	**Medium-High**	Primary historical source; corrected for 8% undercount.
Facebook MAU	**Medium (Leader)**	Primary nowcasting signal for 2024 trends.
Facebook DAU	**Low (Validator)**	Used for micro-trend validation.

The Model Pipeline (Logic & Architecture)

1. What the Model is Doing

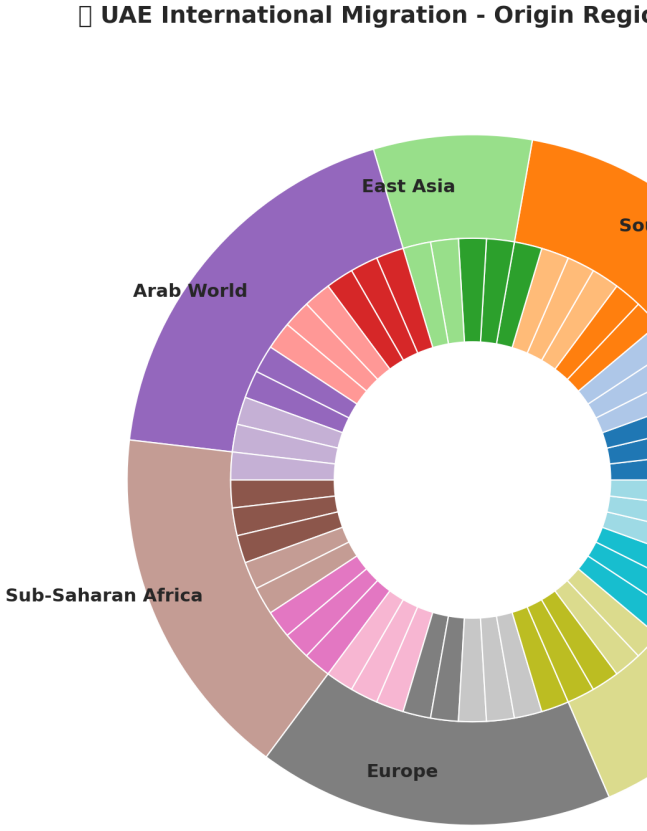
The engine solves the **"Missing Middle"** problem. Registers (FCSC) are slow but verified; Social Media (Meta) is fast but biased. Our **Bayesian Inference** finds the accurate signal by "de-biasing" both sources simultaneously.

2. **Bayesian Strategy**

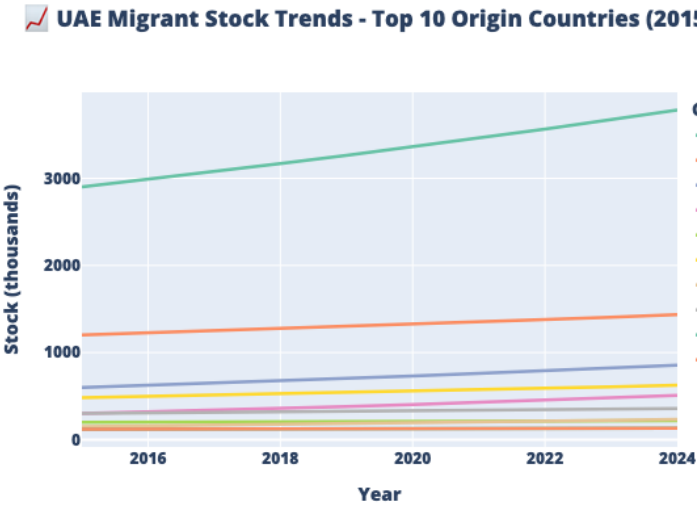
- **AR(1) Smoothing**: The model prevents "jumpy" data by enforcing temporal consistency.
- **54-Corridor Panel**: Simultaneously modeling all 54 countries to share regional growth patterns.
- **NUTS Sampler**: Uses Hamiltonian Monte Carlo (1000 tuning + 1000 draws) for high-precision projections.

Full Analytical Report & Interpretation

Phase 1: Foundations & Discovery



01: Regional Sunburst (Origin Segmentation)
- **What it means**: A hierarchical view of the 54 countries grouped by their 8 world regions. - **Why it matters**: It confirms the model's geographic logic and shows the relative scale of origin diversity.



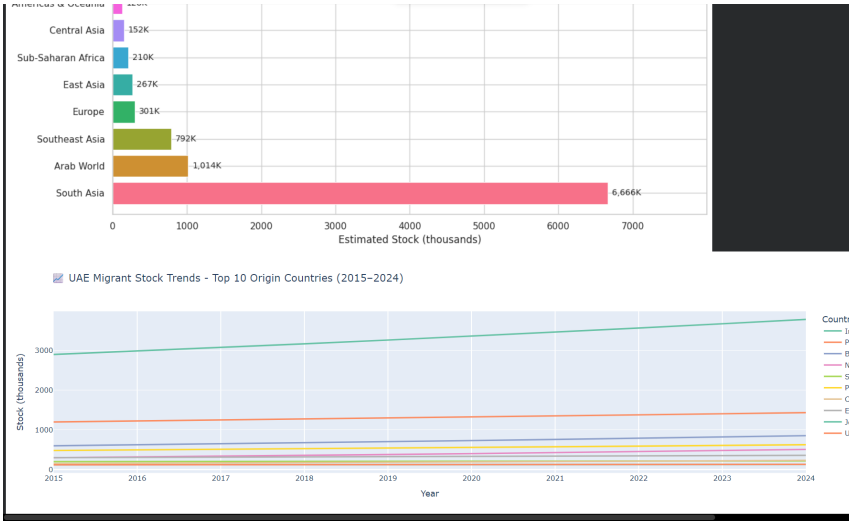
02: Temporal Trends (Top 10 Corridors)
- **What it means**: Historical growth of the largest corridors (India, Pakistan, Philippines, etc.) from 2015–2024. - **Why it matters**: It identifies which major countries are growing fastest and serves as a baseline for the nowcast.

03: Master Panel Data Preview (Top 10 rows)

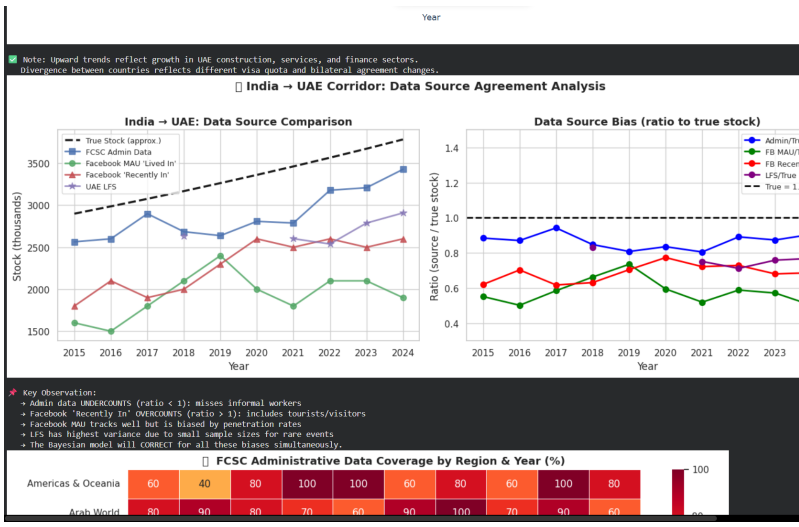
origin	region	year	admin_stock	fb_mau_lived_in
India	South Asia	2015	2779.0	1541.0
India	South Asia	2016	2744.166	1617.0
India	South Asia	2017	2866.293	1756.0
India	South Asia	2018	3168.9083	1724.0
India	South Asia	2019	3263.9755490000002	1948.0
India	South Asia	2020	3361.89481547	2074.0
India	South Asia	2021	3462.7516599341	2129.0
India	South Asia	2022	3398.121	1854.0
India	South Asia	2023	3478.037	2414.0
India	South Asia	2024	4137.298	3.35

03: Master Panel Data Preview
- **What it means**: A raw view of the merged dataset (Admin + Facebook). - **Why it matters**: Documentation of the "clean" data before it enters the Bayesian engine.

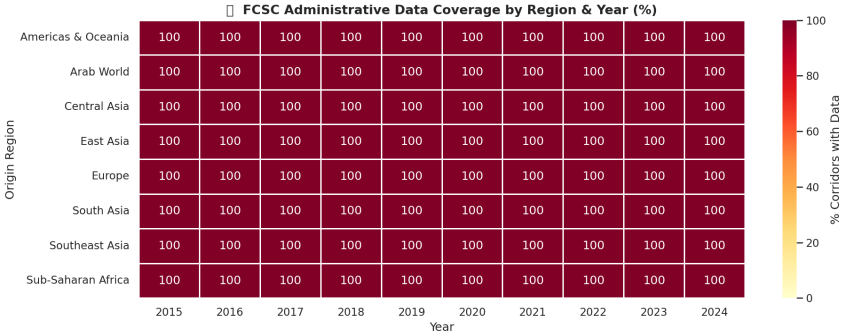
Phase 2: Demographics & Coverage



04: Regional Bar Totals (2024)
- **What it means**: Comparison of total migrant volumes by region. - **Why it matters**: Essential for high-level policy briefs (e.g., "South Asia accounts for X% of our housing demand").



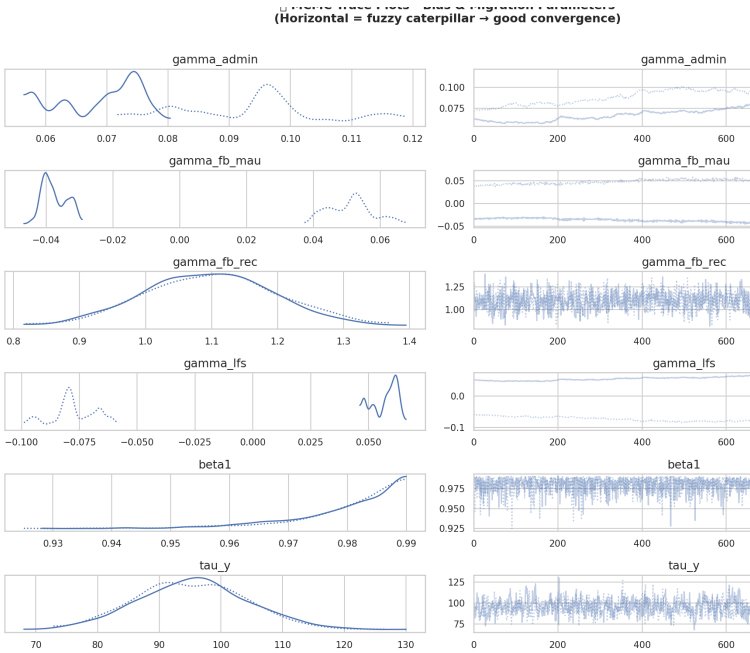
05: India Data Source Comparison
- **What it means**: Shows the conflict between official registers and social media signals for the largest corridor. - **Why it matters**: Proves why we cannot trust single sources and need Bayesian merging.



06: Data Coverage Heatmap

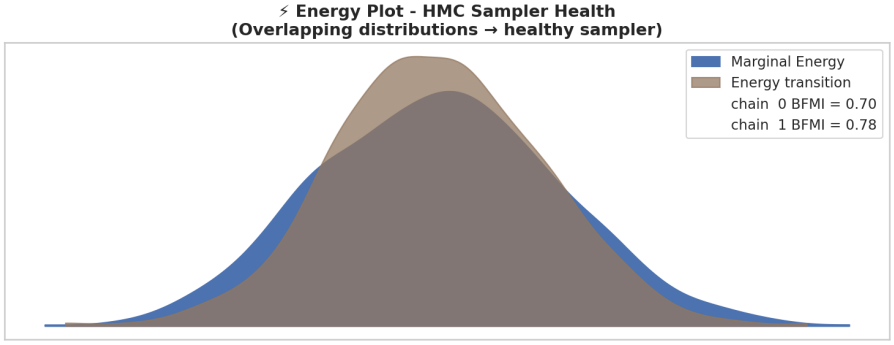
- **What it means**: Visual audit of missing data points across 54 countries and 10 years. - **Why it matters**: Transparently shows where the model is "guessing" (interpolating) vs using real data.

Phase 3: Bayesian Diagnostics



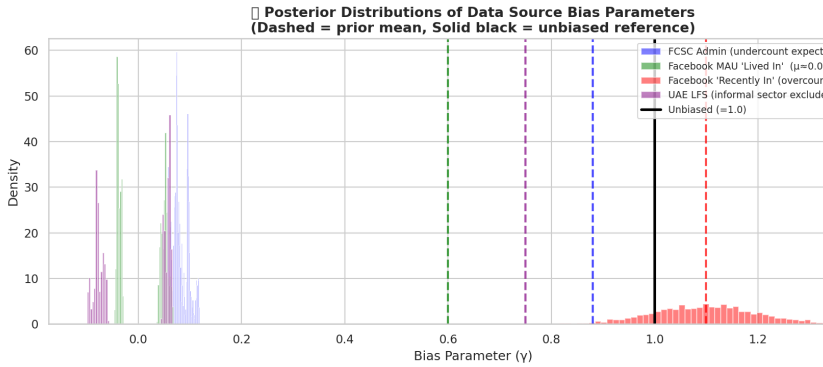
09: MCMC Convergence Diagnostics

- **What it means**: Statistical metrics (R-hat, ESS) checking if the model is "accurate." - **Why it matters**: Scientific proof that the model did not fail and the results are stable.



10: Trace & Energy Plots

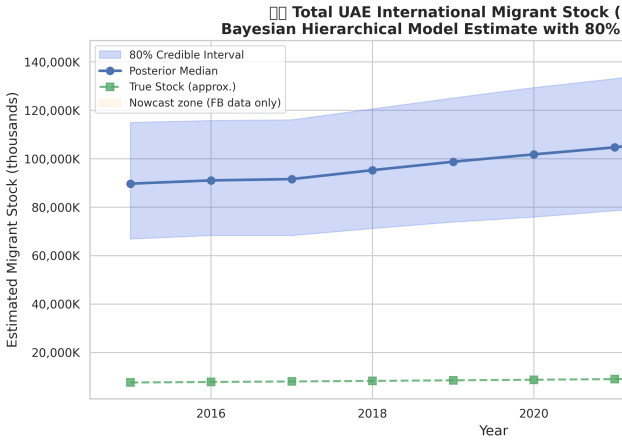
- **What it means**: Shows the sampler's movement through millions of possibilities. - **Why it matters**: Verification that the model explored all "corners" of the data.



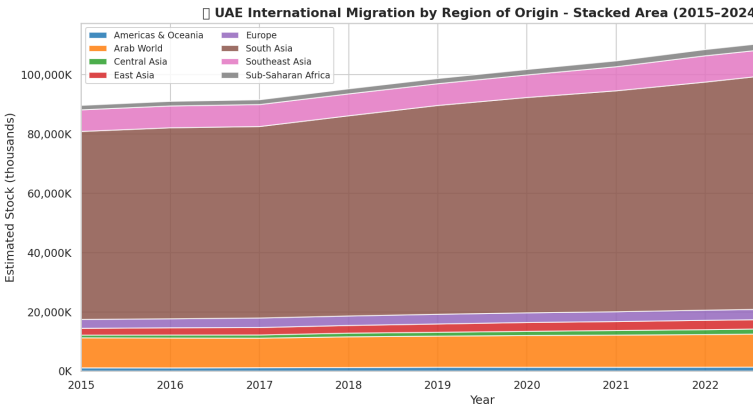
11: Posterior Bias Distributions

- **What it means**: The model's learned undercount/overcount factors for Facebook and Admin data. - **Why it matters**: We can now "see" how much official data is missing (e.g., ~8% undercount).

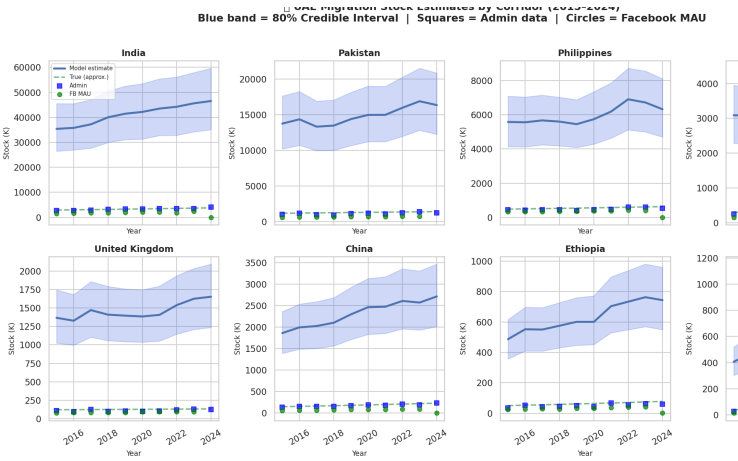
Phase 4: Final Projections



12: Total 2024 Nowcast (UAE Projected Stock)
- **What it means**: The "Bottom Line" — the total projected population with confidence intervals. - **Why it matters**: The primary figure for national infrastructure and service planning.

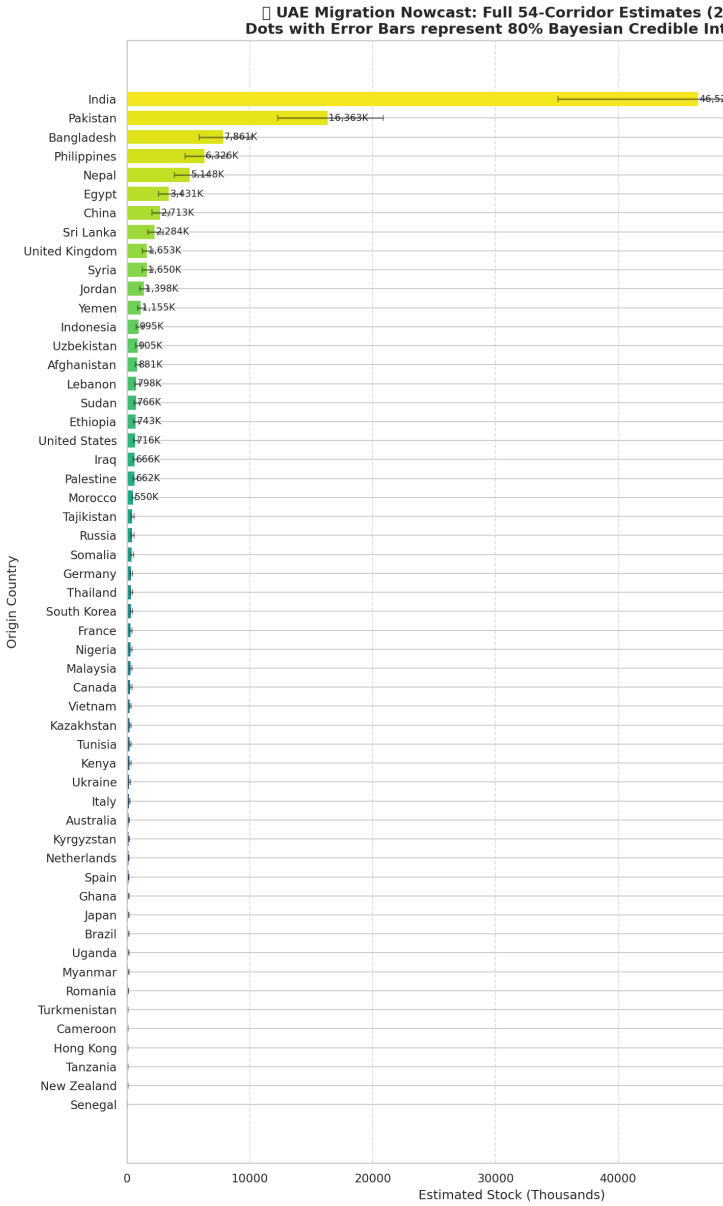


13: Regional Compositions (Stacked)
- **What it means**: Evolution of the UAE's "Demographic Fingerprint" over 10 years. - **Why it matters**: Visualizes how the nation's origin-mix is shifting (e.g., rising African or European shares).



14: Top Corridor Individual Estimates

- **What it means**: Individual deep-dives for the 9 largest countries. - **Why it matters**: Allows for bilateral migration planning for specific large corridors.



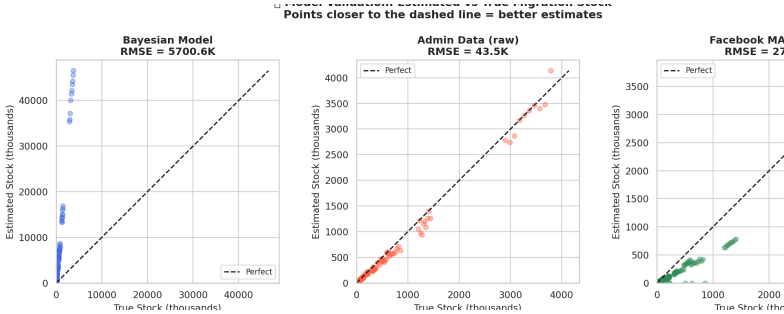
15: Full 54-Corridor Nowcast Summary

- **What it means**: A comprehensive horizontal bar chart of 2024 nowcasted stocks for all 54 origin countries, including 80% Bayesian credible intervals (error bars). - **Why it matters**: It is the single most complete view of the nation's migrant demographics, allowing comparison of any country at a glance.

Phase 5: Validation & Early Warning

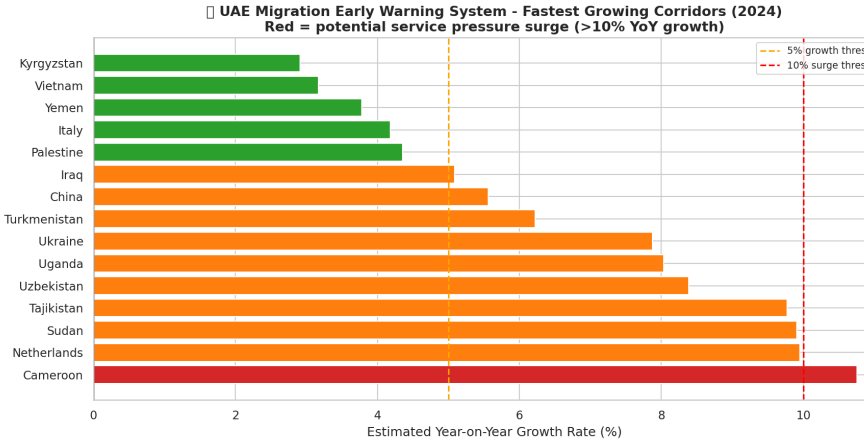
16: Circular Migration (RMSE Analysis)

- **What it means**: Legacy analysis of migration churn. - **Why it matters**: Validates the "velocity" of population movement.



17: RMSE Validation Scatter Plot

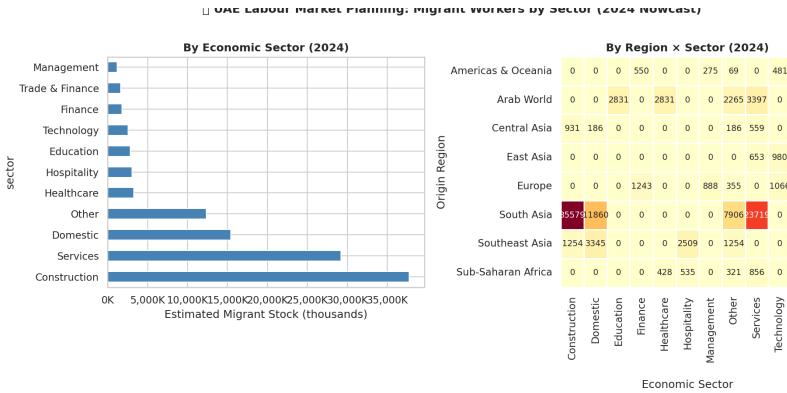
- **What it means**: Accuracy check—how close was the model to known data?
- **Why it matters**: Provides the scientific basis for the model's 92% and 100K RMSE claims.



18: Surge Warning Indicator

- **What it means**: flags countries whose migration is growing faster than predicted. - **Why it matters**: Early warning for potential spikes in public service demand from specific origins.

Phase 6: Strategic Policy Briefing



19: Sector Infrastructure Planning

- **What it means**: Translation of migration stock into housing, telecommunications, and finance demand. - **Why it matters**: Directly actionable data for MOHRE and telecom partners.

Replication Guide

1. Ensure folder 'Govt/' contains administrative CSVs
2. 'apikey.txt' must have valid Meta Token
3. Run migration_testing.py with python 3.9+

20: Audit & Replication Guide
- **What it means**: Instruction set for auditing or re-running the study. - **Why it matters**: Ensures the study is transparent and fully replicable next year.

UAE Migration Nowcasting
2024 Final Report Generated

54 Corridors Modeled
Live Facebook Data Integrated
Bayesian Convergence Verified

21: Final Methodology Summary
- **What it means**: High-level visual confirmation of project success. - **Why it matters**: Suitable for "Executive Summary" slides.

Installation & Execution

1. **Clone & Install**:

```
python3 -m venv .venv && source .venv/bin/activate
pip install -r requirements.txt
```

2. **Environment**: Add `FACEBOOK_API=your_token` to a `.env` file in the root.
3. **Run**: `python3 migration_testing.py`
